Its purpose is similar to your own but it has a lot more power. Functional genomics: from the bedside to the genome. This chapter aims to discuss the many challenges facing the cardiovascular research community when it comes to understanding disease pathogenesis at the molecular level, specifically with respect to the functional genomics paradigm. In many ways, the field of cardiovascular genetics was set in motion by the completion of the human genome sequence in 2001, with the hopes that this would give researchers the opportunity to not only better understand the molecular basis of cardiovascular disease, but also identify novel therapeutic targets for future drug development. Unfortunately, it has become clear that achieving these goals has been more difficult than originally anticipated, with reports that despite the identification of thousands of "disease genes", only a handful of these provide any practical insight into the pathogenesis of human cardiovascular disease. This has prompted many investigators to re-examine the whole paradigm, and one hypothesis, which has

received considerable support, is that the identification of single-nucleotide polymorphisms (SNPs) as the most common cause of disease is a limited view of a much larger and complex genetic mechanism. This chapter will also discuss how we might potentially be able to gain further insight into this process, with a particular focus on the current ability to integrate the genotypic information with "omic" information. A 9-year-old girl was allegedly raped by her uncle, days after her parents have lodged a complaint of domestic violence against him. According to the complaint filed at the police station in Dehradun, the minor girl's parents and uncle argued over issues related to domestic violence. When the uncle left the house on Friday, he returned on Saturday and raped the girl, the police said. On Monday, when the parents went to collect the minor girl from the uncle's house, they found her in a "state of shock" and alerted the police, who registered the case. The minor girl, meanwhile, has been sent for a medical examination and the police will write to the girl's father to lodge a complaint of rape. "As per the girl's statement, her uncle had kept her and her parents at gun point. 77a5ca646e

Danville [Calif.] — Today, the Senate Appropriations Committee has approved legislation that would provide \$20 billion for a nationwide network of interoperable radio frequency identification (RFID) readers that local police, fire departments and other public safety agencies can use to track, identify and track people, animals, vehicles and other objects in the field. After concluding a series of public hearings on the issue in early July, the Appropriations Committee sent a mark-up of the RFID Funding Act to the full Senate and the House on July 25. Committee members who supported the legislation during the mark-up included Sens. Barbara Boxer (D-Calif.), Debbie Stabenow (D-Mich.), Charles Schumer (D-N.Y.), Patrick Leahy (D-Vt.), Dick Durbin (D-Ill.), Jeff Bingaman (D-N.M.), John Kerry (D-Mass.), Joe Lieberman (D-Conn.), Charles Grassley (R-Iowa), Dianne Feinstein (D-Calif.), Lindsey Graham (R-S.C.), Susan Collins (R-Maine), Robert Menendez (D-N.J.), Ben Nelson (D-Neb.), Evan Bayh (D-Ind.) and Joe Manchin (D-W.Va.). “The \$20 billion being proposed for the RFID technology would bring the cost of this program to only about \$7.5 billion over 10 years,” said Council of Law Enforcement Leaders of America (CLEOLA) President David A. Harris, Jr. “This amount represents just a fraction of the total law enforcement budget — about \$8.2 billion in 2010 — and is substantially less than the \$15.5 billion spent on dogs and their handlers and \$4.8 billion spent on civilian employees.” CLEOLA points out that most of the money for the radio frequency
