AutoCAD and Acronis have several similarities: both AutoCAD and Acronis are based on the same underlying architecture, and their flagship products, AutoCAD and Acronis TrueImage, use similar self-service backup and recovery (BSR) technologies. Acronis is not owned by Autodesk, and it is an entirely different company that focuses exclusively on data recovery. AutoCAD and Acronis both offer two data recovery methods: rapid backup and faster and fuller recovery. You can also back up data in the cloud. But that is a little way off because, with some exceptions, cloud-based services are still in their infancy. Other similarities between AutoCAD and Acronis include the fact that both AutoCAD and Acronis are commercial computer-aided design and drafting programs, and both run on a Windows OS. Also, AutoCAD and Acronis both use a similar four-sided structure called a "modeling environment" (and AutoCAD and Acronis are both labeled as "AutoCAD"). AutoCAD and Acronis also use similar user interfaces. A major difference between AutoCAD and Acronis is the fact that AutoCAD is a desktop program while Acronis is a software package, a data recovery solution and a data backup and recovery software solution all rolled into one. The Acronis website says, "We are the data recovery specialists." And for a good reason. The Acronis backup software solution has the unique ability to back up and restore individual files as well as entire system configurations. Acronis has more features and much more functionality than AutoCAD. AutoCAD vs Acronis - Data Recovery Since the release of the Acronis application, Acronis TrueImage, in 1997, Acronis has become a leading data recovery software solution for Windows operating systems. In 2013, Acronis reported that approximately 5 million computers worldwide were running Acronis data recovery software. When Acronis released its data recovery software for the iPhone, Acronis claimed that there were more than a million iPhone users that had downloaded its software for data recovery. Since then, Acronis has released two other major data recovery products for Android and Windows phones. Data recovery on mobile phones was a novelty back then, but Acronis and other data recovery companies now have products for all major mobile operating systems. An overview of the features available
