The use of electric motors and equipment are becoming more prevalent in the poultry industry, especially in the processing of poultry carcasses. The carcasses, as a result of processing, are typically wet and dirty and are normally transported through a series of water baths to clean the carcass. The conveyor belt in these installations are typically of the endless belt type and have a rigid frame about which the endless belt is mounted. Conveyor rollers are provided on the opposite side of the belt frame and are supported for rotation by the frame. The rollers are normally spaced in a criss-cross pattern so that the carcass passes through a first roller one side and then back over the second roller of the criss-cross pattern, traveling back and forth across the rollers. In order to prevent the carcasses from jamming and to ensure that the carcasses are properly washed, it is necessary to avoid having the carcasses hang up on the belt rollers. It is therefore the object of this invention to provide a system to prevent the carcass from hanging up on the rollers of the belt. A further object of this invention is to provide a system which allows the automatic adjustment of the carcass guide to allow the removal of carcasses of varying widths, while preventing the carcass from sliding off of the guide. A further object of this invention is to provide a system which can be utilized for a continuous, uninterrupted wash line having a high carcass throughput.Q: Copy.XLSM file in InDesign and save as.XLSX file - Import Error I'm trying to export my In
