In addition to performing those "undefined" actions described above, Time Traveler adds a unique ability to allow you to revert back to the version of a file you desire. To revert back to a version of a file in WHS, you're provided with the ability to perform a three-step process: Revert to a specific file version (increments). Revert to the

---

most recent file version. Revert back to an older version of the file. NOTE: If you re-version to any or all versions of a file that already exists in WHS, the versioned files will be replaced - it's the same effect as deleting the file and creating a new version. General Settings: Revert To: Will set the file version you want to revert back to. Isolated: Will set whether you want to have the file

---

restored for multiple users or only the person who first restored the file. Setup: Time Traveler must be setup in two settings: Revert To: MUST be setup so that your reverted file will revert back to a specific version. Isolated: MUST be setup so that the reverted file will revert back to the highest version. \*\* The instance of a file you specify MUST already exist in WHS before you're able

---

to see the table of versions of that file and select the version you'd like to revert back to. \*\* The user who reverts the file back to must be setup to have access to the file in order to be able to select the desired version of that file. \*\* You cannot set a "last" or "next" version to revert back to; the instance of the file you're reverting back to must be first in the WHS version table. Show

---

Versions: (Will show the version history table of a file - when used with the "Revert To:" option). Restore File (Reverts back to the version specified in "Revert To" selection): If you need to revert back to a specific version of a file that already exists in WHS but you can't select any existing versions, the file is deleted and then restored back. Delete File (Moves the file version to be

---

deleted to a deleted state):

Deleting a file in WHS will not delete the file. Deleting the file will move it to a deleted state.
