If you want to use the latest service pack after SP2, this it the A: The correct answer is already posted, but just in case you want the.txt file, or the equivalent with the ILC addon, you can find it here Q: Why does my decoded JSON.stringify output a string as an array if my array is defined as string[]? This is my initial state... In my component, I have this: input: string[] = []; decodedInput = json.stringify(input); output = JSON.parse(decodedInput); input field contains this: ["sometext, somethingElse"] output field contains this: ["sometext, somethingElse"][0],["sometext, somethingElse"][1] etc. This is how I want the output to be. But the output is not as i want, the numbers have been concatenated... output should be: "sometext, somethingElse" The expected result should be an array of strings. Why does this happen? Update: This doesn't work anymore either: input = JSON.parse(decodedInput); A: After checking all docs, I found that apparently they do not support Array.of(). In order to solve this problem, I need to re-define my array. So: input = JSON.parse(decodedInput); output = Array.of(input);
