Open up command line again > Rescale tool and now, choose scale to set the scale for that specific object. 6. Do another resizing and you'll see that the scale is changing. 7. Finally, choose from command line > Free tool > Scaling tool. This will change all the scale of all the objects in the *.dxf file. 4. Export the file - Save the file as a *.dwg file. 5. Navigate to your Autocad.exe and right click > Export. 6. Confirm your settings as below. 7. Finish ----- After you have done step 6, you will not be able to move your file from your desktop to Autocad. To open your file in Autocad, you need to first import it to Autocad. ----- You now need to open up your *.dwg file in Autocad and then navigate to command line > change to scale. 3. Add your scale and make sure the rotation is correct. You should be looking at 0.05 for the scale. 4. Check the translation. The translation should be about 6-7 for the scale of 0.05. 5. Now, you need to add the rotation. 6. When you rotate the scale 90 degrees, you should see the pattern that we started with. This is good. 7. Now, we need to connect the x, y and z axis. 8. If you rotate the x and z axis, you should see that your pattern is rotated 180 degrees. If you do this twice, you should get the final output. 9. Now, you need to check the scale for the x, y and z axis. 10. If your scale is the correct scale, that is 0.05, then you are good to go. 11.
