It supports over 100 different website file types (including PDFs and multi-page spreadsheets), and even if a page is only in English, Fast Site Inspector Cracked Version will crawl it and give you a relevant output. The crawler gives you access to detailed pages and directories, including their content, metadata, and URL, as well as the ability to extract and analyze images, tables, videos, and more. So let's see how this program works. In order to use it, you'll have to install the software, which will take only a couple of minutes. After this, you need to add a few websites you want to analyze, but before you do that, let's see how the interface works. Here is how it works. When you first open Fast Site Inspector, you'll see a summary of what the program does and what it can do. The "+" button is the first you'll have to use. There, you'll see a list of websites that you can start scanning. Each of these websites is displayed under the heading "Selected sites". By pressing the plus sign you'll be able to add websites to the list. After the number of websites you've added exceeds five, you'll have to start a new session. By pressing "Start", the crawler will begin crawling the websites in your list, one by one. The list you can see on the left represents the pages it has crawled. For instance, if we press the "Selected sites" button and scroll down to the "PAGE" column, we'll see a list of all the pages the crawler has crawled so far. By clicking the mouse on one of the pages, we can see a summary of the crawler's findings. In addition, there are two buttons on the left side of the interface. They are labeled "MENU" and "Help". By clicking "MENU" you'll be able to access the following options: - Stop scanning - Set
