The original source of the picture in your hard drive. This value is set by clicking on "Browse", using the arrow of your mouse. It can be: the original image, the scaled and quality-reduced image, or the resized image. Add Images to Conversion : To add images to the current conversion, click on "Add Images" button. Select the source of the image, the destination format and add the images to the conversion. Delete Images from Conversion : To delete images from the current conversion, click on "Delete Images" button. You can choose to delete the last image in the conversion or all the images. Change the Quality of the Image: To change the quality of the image, click on the "quality" button. From 1 to 9, you will have 9 quality settings to choose from. The first quality is set at "100%". The second at "75%". The third at "50%". The fourth at "25%". The fifth at "5%". The sixth at "0.5%". The seventh at "0.25%". The eighth at "0.125%". The ninth at "0.01%". The quality numbers represent the size of the image file. As the quality increases, the file size increases too. The quality setting will have a big impact on the image file size. The quality percentage, in percentages, will multiply the file size by 100%. Search For Images: If you don't know the name of the image you want to convert, click on the "Search" button. This will show you all the names of the images in the current directory. Click on the image name that you want to convert and click "Convert". Browse for Images: This will show you all the images in the current directory. You can select the image you want to convert by clicking on the image name. Convert Images: Click on "Convert" button. Choose the "Image format" and "Conversion Speed" you want to use. You can choose to scale the image down by clicking on "Scale image". If you choose "Resize image", you can resize the image to fit the selected size. If you choose "Quality settings", you will see a quality number in the image. The higher the number, the lower the quality. If you want to have an image with a higher quality than the quality number, you will have to scale the image
