"Str8 Compass: Founder's Edition" is a PlayStation VR exclusive game from the creators of "The Unseen World", a renowned horror game series. It is available for early access from December 6th, 2017 at 9 AM PST.1. Field of the Invention The present invention generally relates to a semiconductor device, and more particularly, to a semiconductor package including an encapsulant formed on a metal substrate and a method for fabricating the same. 2. Description of the Related Art In recent years, reduction in the size and thickness of semiconductor packages have been increasingly demanded for the purpose of miniaturizing electronic devices, and thus, semiconductor packages are also required to become smaller and thinner. To this end, a semiconductor device having an encapsulant formed on a metal substrate by a method other than a traditional method of transfer molding has been under development. FIGS. 1A to 1F are cross-sectional views illustrating a method for fabricating a conventional semiconductor package. FIGS. 2A to 2F are cross-sectional views illustrating a method for fabricating another conventional semiconductor package. In the method for fabricating a semiconductor package illustrated in FIGS. 1A to 1F, a metal substrate 20 including a solder ball 20a formed on a first surface thereof is prepared, and then, a semiconductor device 10 is bonded to the metal substrate 20 using conductive adhesive 11. Next, the metal substrate 20 including the semiconductor device 10 is mounted on a heat sink 30. The heat sink 30 is fixed to a printed circuit board 40 using solder 41. A wiring pattern 42 of the printed circuit

board 40 is electrically connected to the solder ball 20a of the metal substrate 20. Next, a first encapsulant 60 having high thermal conductivity is formed around the entire metal substrate 20. Then, as illustrated in FIG. 1C, the metal substrate 20 including the semiconductor device 10 is heated at a temperature which is equal to or lower than a melting point of solder, to solder the metal substrate 20 to the printed circuit board 40. Thus, a final semiconductor
