Once connected, you can save the files from the camera to your computer. Normally, the computer makes the first pass through the images to determine where they are positioned on the computer screen. It then displays the images with the display set to the correct aspect ratio. If the aspect ratio is not set correctly, the images will automatically stretch or scroll, giving the illusion that the picture was taken at a different aspect ratio than the computer screen. When the images display, change the display settings to something other than 100 percent. The standard aspect ratio is usually 4:3, but you should set the display to something smaller — 1:1 or 1:2 if possible. ## Recreating the Camera The first thing you want to do is make sure that the camera's information is in tact. This includes the make, model, firmware, serial number, and other details. If you can't find a copy, you may need to buy a refurbished camera. It is always a good idea to try to get the camera apart, to see if there are any signs of internal damage or tampering. If you can't get it apart, you can try to replace the memory card. If the camera seems to be working fine, and you have access to a camera shop, you may be able to buy a used camera. ## Taking the Image You will want to use the same lens that was used for the initial photo shoot. If you had an 18–55mm, that's a good choice. Open the file directory from where the images were saved, or use the file browser that came with your computer to find them. For a PDF of the complete guide, please see the Download Instructions at the back of the book.

We present observations on the effects of various stressors on the reproducibility of sporozoite-like cells (SLC) detected in splenic smears from Aedes aegypti infected with Plasmodium gallinaceum, Puccinia recondita, or Crenosoma striatum. Strain-dependent decreases in SLC detection were observed, but generally only in the presence of added stresses. Increasing the duration of smear collection from the initial 100 to 300 s decreased SLC detectability in Aedes-infected mosquitoes but not in Crenosoma-infected mosquitoes. Shortening the time between splenectomy and smearing of the spleen also increased SLC detectability in Aedes-infected mosquitoes.Tuesday, August 24, 2009 The Perks of Being the Coolest Girl in the World (Under 30) When I moved to New York City in 1999, it was like the most exciting thing that ever happened to me. I was twenty-three and had a gap year ahead of me. It was a magical, magical time and I couldn't wait to get started. I applied to work in real estate, but the numbers were terrible. But, one of the partners at my favorite Upper East Side boutique, Frederick's of Hollywood, was dying to get someone to take over his wife's husband's job. He needed someone to take over the assistant manager role, and I was jumping at the chance to be a part of a thriving clothing store, but I wanted to work at a hip boutique. So, I said yes. You know what else? I was broke. Sometimes I would go to a restaurant and pay for one/two meals. Sometimes I wouldn't. But, it was fabulous. I was at a specialty store with expensive clothes. I could spend my money on those clothes instead of groceries. We don't have credit cards in Italy
