With great elemental powers comes great responsibility... YOU are the Avatar, the bravest of the elements! With YOUR courage, abilities and weaknesses, YOU can help your Allies defeat the monsters of the elements! "You have to face the challenges of the different worlds, fight the enemy, collect your allies and eventually stand victorious in the end." The Legend is out there. The world is in jeopardy. It has fallen into darkness. It is a world where the four elements are crumbling, a world where neither sanity nor hope remain... This game is designed to let you face a story in a non-linear fashion. You will wander through the lands with your Heroes and monsters, find items to help you on your journey and answer multiple questions in order to solve the mystery that lies in front of you.

Your main characters are: - Hero: The Hero is the central character who embodies the power of the elements. They wield the powers of the elements and transform into a different element with the use of magic. Each hero can select a special power which will greatly affect the gameplay of the game. -

Hero Master: The Master of Element, a mythical figure who can wield the powers of the elements. The Hero Master can permanently switch the powers of the Hero. - Element Rune: Element Rune can affect and enhance the attributes of the Hero or their Hero Master, changing them into a completely different Element. Example: The hero can transform into an Elemental Hero, while the Hero Master can transform into a Rune Master. - Avatars: Avatar is one of the 4 elements. Aesthetics and

Attributes are unique to the Avatars. Each Avatar can perform a unique combination of powers. Avatars can be referred to as Elements. Each has unique attributes. Avatars can be used to attack, to set up challenges, to move to different locations and the list goes on! Gameplay differences Each playthrough differs from the previous. There are over 200 elements, which will affect and change the appearance of each map. Watch out for the monsters and the challenges they will face! Some of them are not easily conquered! There are 5 maps available in the original game, but there are more available in the "Enhancements" DLC. "The world is shaking... Who is the savior that will rise and stop the darkness?" This game consists of 4 elements that can be forged by combining the Elements

What's new:

-HEV battery instant-on Today's electric vehicle (EV) market is vastly different than it was just a few years ago. When Tesla launched its first EV, the Roadster, it was clearly ahead of its competitors. Obviously, nothing requires a manufacturer to launch an electric vehicle with a mythical maximum range. What sets Tesla apart are the world-class amenities (and by 'facilities' I mean superchargers and public charging stations) that are included with every model. Other manufacturers began packaging some of these amenities by selling their buyers insurance for the only disadvantage Tesla owners experienced with their vehicle — charging with a public charging station. The Tesla example is not hard to follow. It boasts the world's longest range (450 miles) on a single charge, a 129-mile recharging time, 1,000 wathour per charging, and ship with a 260-kWh battery pack. The primary competitor to Tesla, the Nissan Leaf, has a

105-mile range on a single charge, a 150-mile range in combination with a battery-swapped car, and 25 hours of optimal recharging. While the Leaf is an impressive EV for its time, it lacks in amenities. Fortunately, the market has evolved to meet the demand from consumers for a capable EV capable of being a great travel companion. EVs such as the Nissan Leaf, Honda Fit, and VW Golf TSI are used as a means of transportation for leisure. Leisure requires a mix of stop-and-go traffic, as well as longer trips. Comfortable for a day trip, leisure EVs are limited by their performance. They are well suited for the market segment which is satisfied with the electrical range of a vehicle. Low-voltage, such as 120 or 54v, requires a low-power CVT (Continuously Variable Transmission) for user comfort. This type of transmission is slow in converting the rotational energy to the motion and effectively reduces the vehicle's performance. The current 4-alternator, 12.6-kW powertrain makes extensive use of the low-friction chain and sprocket. The engine is a 4-cylinder, 8-valve DOHC 32-valve with Holset as the camshaft manufacturer, DOHC with Pushrods, overhead with 14-lap lifter with roller finger followers. The maintenance are rather simple, consisting of replacing the pushrods and lifters. Pistons and valves are all original and it has over 100K miles of service
