Q: How to delete file that has been added to the source tree in a workspace I was working on a solution, however, in the process I accidentally added a file that should not have been in the project to the source tree. I have tried hitting the red! and! in the file browser and the solution crashes (somehow). It is giving me the error: The file "S:\Work\Solution\Library\Exception\Library.cs" is already part of the project "S:\Work\Solution". How do I remove that file from the source tree? A: I would just go to Solution explorer and select the "unload all files" and "clean" for the solution. I'm not 100% sure about that last one, but I think that will clean out everything that's loaded in the solution. If you have source files in source control, you're going to have to remove them from source control manually of course. You don't mention what version of Visual Studio you're using. But the Quick Solutions dialog does have an "unload" option where you'll see this dialog: You can also right-click on the project name in solution explorer, and select "Unload Project".
