FILE PHOTO: U.S. President Donald Trump speaks to the media before departing Washington International Airport in Washington, U.S., October 8, 2019. REUTERS/Joshua Roberts WASHINGTON (Reuters) - U.S. President Donald Trump said on Friday he would be announcing his next pick for the U.S. Supreme Court on Monday, indicating his choice is likely to be a conservative judge. "Monday, I will be announcing my nomination for the United States Supreme Court," Trump said in a series of tweets. Q: Adding properties to an object, from an array of another object I have an array of objects, each of these objects has properties in them. What I am trying to do, is to add another property to these objects, from an array. So I would create a new object, add that property, then add this new object to the original array. I have this code: `var result = window.URL || window.webkitURL; var hostName = result.hostname; var scheme = result.protocol; var path = result.pathname; var resultArray = []; hostName.split(".").reverse().forEach(function(x){ resultArray.push({ key: x, value: resultArray[i - 1] }) })` The resultArray looks like this: `[ { key: "example.com", value: [{.....}] }, { key: "example.com", value: [{.....}] } ]` From this, I have been trying to make it so my new object looks like: `[ { key: "example.com", value: [{.....}, {.....}] }`

Q: How to customize LINQ query in VB.net I am working on a project that use the userinformation data in the database. There are tables like user(id, name, password, psword,...), usergroups(id, groupname), usergroupsrole(groupid, userid, role), userrole masks(groupid, userid, roleid,...). I have to retrieve the list of users group from the user information table. Usergroup Id is the foreign key for user groups table. I have written query which is working fine. But the problem is I have to get list of users with their usersgroups. so I wrote the query like this IQueryable query = from user in userList from usergroups in user.UserGroups where user.Id.Equals(userGroups.Id) select new User { user = user, userGroups = userGroups }; But now I have to make another query in it. I don't know how to make it using Linq or IQueryable. I have to fetch the users which have roleid="2". here 2 is userid for user usergroupsrole 1
