

The GIMP Essentials GIMP is a free download. You'll need to install it on your computer before you can work with it. Here are some things you'll need to know if you are just getting started with GIMP: * The name GIMP stands for GNU Image Manipulation Program. Although GIMP is free, this doesn't mean that it's open source; it refers to the terms and conditions that came with the free GIMP download. It is more akin to a license because you do have the rights to use the software. * You will need a photo editing program on your computer, such as Photoshop or GIMP. * You will need an image you want to edit. * You will need to install GIMP. * The first step is to open GIMP. You'll also want to

Q: how to use mysql in c# i'm new to android application development, i've created android app and its working fine now i want to make a web service and connect to my mysql database, please suggest me a tutorial or something where i can understand how to connect to mysql database and retrieve data and how to update data and save it to mysql database. A: You have to get MySQL connector if you want to connect it with C#. Here you can find the installer : I suppose you have a local instance of MySQL server running? You can create a simple ASP.NET Web Service (you just have to implement your DAL and Web Service interface) and call a method that will return a list of objects from your database : `public IList GetMyModelData() { // ToDo : Connection string, TableNames, CreateStoredProc, etc... // Return List of MyModel instance objects return MyModelList; }` Hope it helps you Q: Good Alternatives for Spring Integration I've started to work with spring Integration recently. It feels great. And all of the components work together to fetch the data in a nice, consistent way. I also use JMS as a transport protocol (see e.g. Now I am wondering if there is a good alternative for spring integration, because I'm also using AMQP as the protocol. Right now I am looking for something like: AMQP-to-JMS (which I don't use yet) Where I can define payloads (something like a message header and the payload) instead of message/inbound-channel-adapter (e.g. to fetch data from a MySQL db, but also to store data to a Mongo db). Is there already something like that available or should I develop something by myself? A: For 1) Spring Integration has the JMS message properties added to the MessageHeaders, as well as the jms

Respiratory syncytial virus, mycoplasma, and chlamydomphila pneumoniae in heart transplant recipients: frequent and potentiated effect of immune suppression. Respiratory syncytial virus, Mycoplasma pneumoniae, and Chlamydomphila pneumoniae were investigated in 46 pretransplant donors and 86 recipients from an adult heart transplantation center. Using the indirect immunofluorescence method, chlamydomphila and mycoplasma were detected in 3 of 3 donors and 2 of 3 recipients (P=0.3) and respiratory syncytial virus in 10 of the 17 patients receiving cyclosporine (P=0.02). CPT 825 with azathioprine improved the negative conversion rate of respiratory syncytial virus in recipients. Fifteen of the 24 immunosuppressed patients (63%) had at least one positive serologic test for one of the three pathogens, compared with 3 of the 62 nonimmunosuppressed patients (5%) (P=0.0001), with a 1.97 relative risk of developing infection with these agents. CPT 825 with azathioprine was more effective for preventing respiratory syncytial virus, mycoplasma, and chlamydomphila pneumoniae infection in heart recipients (P=0.003, P=0.03, and P=0.001, respectively). Aging is the largest known risk factor for degenerative neurological disease. Neurodegenerative dementias and age-related motor neuron diseases are characterized by protein aggregation, aberrant synaptic functions, and progressive loss of neuronal functions. The long-term objective of this proposal is to identify the critical molecular events that lead to neurodegeneration, in order to develop new pharmacologic therapies to prevent these disorders. One of the most prominent neurodegenerative disorders, Alzheimer's disease (AD), is characterized by progressive neuronal loss, accumulation of extracellular amyloid plaques, and intracellular neurofibrillary tangles. It is thought that amyloid plaques may kill nerve cells by excitotoxic or inflammatory mechanisms, leading to neuronal death. Mice lacking amyloid precursor protein (APP) exhibit a normal life span, but die of spontaneous hyperactivity and motor defects. Abnormal synaptic functions and deficits in long-term potentiation (LTP) are observed in APP mutant mice. The molecular mechanisms underlying these abnormal synaptic functions and neuronal loss are still unclear
