- An Encyclopedic Overview This amazing YouTube video overview of the history of art shows many fascinating details that you probably never knew existed! Art aficionado and Art Institute instructor, Philip Jankowiak, assembles a collection of animated links on one page that collectively chronicle the long and colorful history of art in the United States and in American History. The great extent and magnitude of the continent's land mass, as well as the sheer diversity of the people and what they could invent, created a phenomenal artistic community. Philip Jankowiak's page has multimedia recordings and links that trace the broad spectrum of human invention and innovation from neolithic cave paintings to the advances of modern communication, engineering, math, science, and philosophy. This is a long and colorful story. This month's topic is Greek and Roman art. Here are a few examples of important works I found by searching this topic. In all this we frequently forget that space, in its turn, is a public and social thing, which is in constant change and need of constant thought and activity... We have missed the opportunity to bring out to the mind the language that it is capable to express itself with. No one has created more than he knows.No one has explored more than he is curious to learn.No one has thought at least without raising questions that echo through both our human awareness and our human contacts. Yes, the mind of the human being is that force.And so the human mind can grow in gratitude for the life and the living, when we know
