I'm using jstree, which is included in the gem, but the only way to get the basic theme is to include the style.css and style.min.css files in the public folder. I've added this line to application.rb: config.assets.precompile += %w(.css.js) But when I go to it displays a 404 error. I can manually put style.min.css into the public/assets/ directory and that displays properly, but that defeats af5dca3d97

Open Autodesk Autocad and load the disk that you will be creating your map on. Copy the file to your computer. Rename it to "*.dwg" (without the quotes). Open the new file with Autocad. In the File menu, go to Open. Select the file and go to Open. Step by step instructions A little more details on each of the steps 1) Autocad allows you to open a saved file. These saved files can be from a variety of sources, but usually these are from when a file was saved on a printer or in a database. In this case we will need to convert the saved.dwg file to a.dwg file. The.dwg file is the file format that Autocad can read and understand. This can be a.dwg file saved in an Autocad session or a.dwg file saved from a database. 2) Once the file has been loaded, you can select the Top View as your view. You can also change this to whatever you want, but the view that I am describing is the default view in Autocad. 3) To change the name of the file, you need to highlight it and go to Properties. In the Properties window you can change the name of the file as you like. 4) Once the name has been changed, you need to copy and paste the name into the field that you need to type it into. For example, if you need to change the name from "Top View.dwg" to "My Map.dwg", you would highlight the Top View.dwg file and go to Properties. In the Properties window, highlight My Map.dwg and go to Copy. 5) Once you have copied the name, go to File > Open, and select the file. 6) Once the file has been selected, you can go to the File menu and select Save. A Save As window will open. 7) In the Save As window, navigate to where you have saved your file. In this case, I have saved it in my \Samples\R&D\Art\Artillery project folder on my C drive. 8) When you have done this, you can go to File > Save As. 9) In the Save As window, navigate to
