The Application Programming Interface (API) is the "hook" that allows AutoCAD to access external programs or libraries. An API can also be used to launch a program or library without using a menu item. This can be very useful if a menu item does not give access to an application that is needed to complete a task in AutoCAD. Examples of this are programs used for draping, stacking, and other AutoCAD tasks. The API defines a structure of methods to send information to AutoCAD and to extract information that is displayed by AutoCAD. It was originally implemented in C++ and has been extended to support other languages such as Java and Visual Basic. With this API, AutoCAD can talk to a number of CAD systems and file formats such as DXF, IGES, Parasolid, STL, STEP, and many others. The AutoCAD API can be used to invoke and control many of AutoCAD's functions, such as draping, placement, and so on. There is a large number of external libraries that use this API to add new functionality to the AutoCAD program, such as OpenDWG, which can be used to read DWG and DWF files and some others. Some of the add-ons available for AutoCAD include: Autodesk ArcCAD Networking Add-in (ANC) AutoCAD LISP BIMblock AutoCAD Spy AutoCAD Spline Fillet DnD Pro Development Tools Draping and Stacking Tools DWG Viewer and Link Viewer DWG/DWF (v. 20.0) Draftsman Explore FlexiMate Geomatix IMT Designer InventorViewer GeoAcademy LiteMatch LPV Magic Wand MIP ParaView Photo Viewer Plane Tools Pro/Engineer Potlatch 2 Pro-Builder PyScad r3d Rod SolidWorks Viewer Spline (v. 19.0) Supra Synapse Task Analysis Trochilus Vector Network Modeling Visual LISP AutoCAD has implemented APIs to enable .NET programmers to write new applications that can communicate with the drawing object model. Since AutoCAD 2007, API changes have required .NET programmers to modify their programs to use the new API. Since af5dca3d97

The Canadian Press The latest historical high for carbon-dioxide emissions from human activity is a good reason to declare a climate emergency and a rallying cry for action, a new study suggests. Carbon-dioxide emissions from all human activities came in at a record high last year, as humanity ended 2017 on track to exceed the 2°C warming target set in the Paris Agreement, according to a detailed new study published Tuesday by the European Union's Copernicus Climate Change Service. The report, which compared trends over the past decade to data gathered during the period before the industrial revolution, shows that CO2 levels in the atmosphere now match what was seen 2.7 million years ago, during the Pliocene era. The period of time is known for a series of severe global ice-age events that are thought to have played a role in shaping the evolutionary landscape of life on Earth. Story continues below advertisement And the report's authors warn that the planet could lock in another ice age "by the end of the century or even sooner." The dire new forecast comes at a critical time in the political debate over how to address climate change, when scientists are calling for an immediate emergency mobilization of resources. The election of Donald Trump as president of the United States and Britain's vote to leave the European Union, for example, were widely seen as potentially catastrophic for the planet. The new report, prepared by scientists from the European Space Agency and European Centre for Medium-Range Weather Forecasts, makes a number of predictions about the future of climate change and its impact. "Humankind has managed to increase CO2 levels in the atmosphere by 40 per cent in the last 100 years, and it is increasing at a rate of 1.2 per cent per year," the report's authors write. Markup Import and Markup Assist Autodesk® AutoCAD® software provides features to easily import user-provided content into your design drawings, such as feedback from paper or PDF forms, from a website, or from Excel. The new feature, AutoCAD Design Markup, lets you send feedback to your design, and incorporate changes to your drawing in a single step. Autodesk AutoCAD software has long supported Markups, which are simple text files that include information about your drawing such as text, comments, and drawing markers. Now, the Markups can be automatically imported into your drawing. To create a Markup, follow these steps: Open the menu bar and select File | Open Markup. Select a file. Insert your comments, text, or drawing marks and their location. Click Save. The imported Markup is incorporated into the drawing, and the design software automatically updates the drawing, text, and comments as you add changes. This makes it easier for you to incorporate feedback or change your drawing when you are designing, which can significantly improve your design process. Rapidly send and incorporate feedback into
