After the 2001 launch of Photoshop, Adobe released their first official version of the Content Aware Fill feature. Content Aware Fill is a new and powerful feature in Photoshop CS4 that fills in the areas of an image that are similar to what's in the surrounding area. This gives the tool a tremendous amount of power, especially in taking out distracting glitches or unwanted content. Geometric gradient fills in Photoshop were introduced in the CS5 release. The appearance of the fills can be modified in many ways, and they can be used as the background for a layer, or as a layer mask, frame, or selection. In addition to the four basic fills presented in the example above, there are eight other fills that one can create. Another new feature is the "Create a Pattern". Right mouse click on the image and select the "Create a Pattern" – this brings up a dialog box with eight presets that you can use and six gradient options to create the final pattern. In Photoshop, you can save a composite (merged) file that is a combination of layers in an image. Just add a new layer, draw on it, and press the "save as" button. Photoshop will automatically merge the new layer into the existing layers. This is a great way to create a good result quickly. Adobe Photoshop is the photo editing powerhouse. This professional tool has been available as a standalone program for decades. Photoshop has a robust feature set for photo editing, including dozens of specialty tools that make the software a go-to solution for advanced users.
