SiteMonitor Enterprise With License Code

SiteMonitor - web monitoring software for users of all levels Website monitoring, full offline control, opensource Maximally user-friendly. SiteMonitor helps you monitor websites that are up or down, so you can turn on/off automatic monitoring as you want. All monitoring data are stored in the database, so you can access it from anywhere, including a website manager (see #3 in list below). How to use Choose a category, specify a host name/URL, and the amount of time between monitoring; For each category, you can assign the checkup frequency and configure log storage. Full offline control. No need to leave your computer on or open a window when checking the website status. The web-based checkup happens in the background. Features: - monitor uptime of multiple hosts/websites (commercial version) - monitor websites offline using web browser extension (commercial version) - checks all sites up to 400 times per day - configurable email alerts - centralized log storage - email reports - CSV exports - opensource (GPL license) - multiple languages: English, Spanish, German, French, Italian, Japanese, Chinese Simplified, Chinese Traditional Install SiteMonitor Visit the download page. The application also comes with a standalone installer, so it's up to you whether to download it, use the website checker, or do both. The website checker does not have any download option, so if you prefer to run the program from the web site, you'll have to visit the download page. You can download the latest version of SiteMonitor here. PyWebMonitor is a python script that lets you monitor any URL or a port of your choice for any application that works over HTTP and have sent HTTP requests. The script is free, open source and easy to use. It's written in python and it's the fastest, easiest to use, quickest and reliable way to monitor your favorite services. It's very simple to use, install and configure. Features: - Allows monitoring of multiple URLs at once. - Allows you to send HTTP requests at the speed of your choice (default 5 requests per second). - Allows you to monitor a server, a service or a set of services. - Allows you to monitor a single host or multiple hosts. - Allows you to monitor your network. - Allows you to monitor any port that has made a HTTP request. - Allows you to 2edc1e01e8

SiteMonitor Enterprise X64
