A new crop and straighten tool helps you adjust images so that they have the right proportions. The crop tool creates an exact crop of the currently active layer; layers can be removed from the cropped content and even repositioned within the image. After cropping a layer is again selected, and the Free Transform tool allows the user to move and resize that part of the image, like a marquee. The new Content-Aware Crop also offers a seven-step crop sequence that can adjust an image with up to 84 percent overlap, and even work with layers locked. The new auto crop tool compensates for any camera movement and is designed to prevent skewed crops (its recommended usage is explicit images with borders). Photoshop CC 2015 now has a more robust selection and move tool; edges are more consistently detected and more cleanly merged; and the new Content-Aware Selection tool is used to remove unwanted items and improve the selection. Widening the selection only works on vertical or horizontal selections. The "good enough" markup is a drop-down menu that was introduced in Photoshop a few versions ago. It's a list of tools and features users have most frequently noticed and wanted to change. It helps you identify areas—and it also helps Adobe to automatically improve where it counts: Your overall experience. When you first open the tool, you're shown a list of edits and tools that users most frequently used. A plus icon indicates a new feature. Everything you see in the tool is based on what other people tell you is missing.

Love it or hate it, Net Neutrality is a hot topic. It has always been a heated debate between ISPs that have a big impact on users' access to the internet and net neutrality proponents who want more control over the companies that route our web data. Net Neutrality means that ISPs can't throttle web traffic or charge companies to be faster, replacing more expensive cable with telecommunications used throughout the internet. Advent Networks is a network security marketing company that is all about growing and promoting the future of business on the Internet. They have taken on the task to shift the industry towards even more security measures. The company does this by featuring a new concept of networking called "looping back". Looping back means that certain ISP's will be blocked from accessing your network once if they are connected in an attempted hack. In addition, consumers connected to the same network will then be able to access those networks. There are a lot of ways that people can use their phones these days, but one of the most popular uses is gaming. Many mobile games will be played over the internet from a mobile device, but you will need a good internet connection in order to do that. Now, a service called 'Internet Access on the Go' is making some big strides toward this. The features of Adobe

Photoshop make it stand apart from other graphics editing softwares. The major selling point is for the large files sizes Photoshop handles easily. You can only get up to 32 MB per layer, or you can load 16 layers if you go for the advanced options, but you can work out this in the extra options too.
