"By combining the power of the desktop and all the connected devices that artists are using today, we are delivering the future of Photoshop for our customers," said Rob Sward, group product manager, Photoshop. "These new features and capabilities are helping to transform our creative processes, and our community has been the first to see the results. Already, more than 30 million of you are using Adobe Creative Cloud to enhance your work and share projects with the world, and as the first to beta test the new editing experience, we're listening to your feedback and experimenting across the board to see how we can simplify editorial processes." With software and services that bring these innovations to life, new ways to collaborate work and edit remotely or easily share content across devices are set to unleash a new level of productivity that will power your creativity across all creative surfaces. With the native tools in Photoshop and the innovative features in Photoshop Elements, Adobe has reinvigorated the photo editing landscape when it comes to handling even the most complicated effects on the Web. Photoshop now completes the set of Web-native tools, allowing Photoshop users to create Web graphics using the same multimedia tools and power they enjoy on their desktop computers. The new Adobe Edge Web Viewer adds the ability to create web graphics from other web browsers, for users who want to view pages as they will appear in the finished project, rather than the icon-based user interface you see when viewing a website in a regular web browser.

Methods now create accurate references for use in Photoshop. It's like having a feature that lets you create a living image of how you want to design in your graphics editor. With tools like the Compare to reference panel it's now simple to create a living image of your design, and then save it as a file for manipulation in Photoshop. You can now use Dimension Expander to expand or stretch the Live Wrap tool box. This uses a 2D measurement to reliably, predictably, and accurately stretch the size of the box, so you can create more precise and consistent dimensions of creative assets. In Photoshop, Blur Gallery can now be easily accessed from the Blur Gallery shortcut menu, with new extensions added to the menu. In the Blur Gallery, you can use the new Extended tool to select multiple objects to blur without the need to leave the tool. You can now use Fashion Design Studio to create make-up on a person's face. Just drag and drop the Makeup Brush into the Fashion Design Studio workspace. Look at your model's eyes, on the resulting photo, switch to the Makeup Brush, and start painting face make-up. Pieces of your designs can now be scaled to 1.4 times the original size, to maintain clarity in the composition. To achieve this, press Cmd + / or Ctrl + on macOS and Cmd + Shift + / or Ctrl + Shift + on Windows to access the Open dialog (or the Content Size panel), and select the Scaled option. This option is available in most programs, so you'll just have to find the Open dialog or Content Size panel.
