Lightroom is my go-to photo editing software. You can buy this on the Apple Store or at most major retailers like Target, Best Buy, Walmart, and many other spots. You can also purchase it as a standalone app for \$30. The thing to keep in mind as you traverse the Lightroom forum is that the updates go out in the order the requests are made. This also means that if you are on an early version of the update (say, BR 2.1.2) you are probably going to get lots of bug fixes and minor changes, perhaps new functionality. The implementation of the idea behind the Adobe subscription model is actually pretty good. The interface is streamlined and easy, allowing loyal Photoshop users to get the full functionality of the program on a monthly basis. It's interactive, with a "Here's what's new for you" section on the home screen. Unfortunately, there are a lot of caveats you have to navigate, and it feels a little disjointed. The first time I got it set up, I almost gave up, but then I found an old printout of the feature list and made a note of how to set up the app, and how to subscribe to it. Then I was able to figure out everything. I generally prefer working with raw files, but they can make my photos look dull and lifeless—especially when shooting portraits. I then rely on Lightroom to help me make certain I don't lose any detail, even in the duller parts of a portrait. In my experience, Photoshop Elements is like the anti-Lightroom. Its menus are clear and easy to navigate, and it's straightforward to use. It's what I'd want if I'm working without an assistant to sort through the programs's daunting array of options.
