Good review but for me still too “soft”. Focus on the camera and not only the shot and how it’s presented with a variable focus, in some cases better and in others less. And the live preview. An option just like the buttons “change zoom” on the fly. I do not want to zoom during the preview so I need to release that button into the storage ... In post, the short version and long version. I like the tool “speed tool”. A processing tool which deletes pixels from the scratch and applies some of the the latest processing software.

Regards! Sren Lightroom might have lost users by virtue of making its features a bit more convenient and user-friendly. I am definitely a fan of the quick importing options, the new ability to copy images to a new location and work on them elsewhere, the duplicate file names, the fast Retouching re-touching, and so forth. Once you have images in your catalog, you can share them or give your better-looking catalog to a colleague, a client, or a friend. You could send them to Lightroom 4 using the Print feature, choose an export preset that will give them the appropriate format, print them. They can even write reviews. In total, there are 22 sliders and controls in Lightroom 5 for controlling all sorts of possible image and metadata settings. One of the most important (and most overlooked) controls is that of the Review panel. Comments that are made in the panel appear in real time, just as they do in Photoshop. It’s a novelty. I like the fact that I can invite someone to comment on my images right within my Lightroom catalog. It’s easy to notice comments on images that you or a friend has added to the project.
